2D Ultrasound Imaging

2D ultrasound technology is used to produce 2-dimensional images of what is happening inside the mother's and baby's bodies. Images are in black & white and have the same level of detail as a photographic negative. The gender of the baby can usually be determined as early as 16 weeks. Although it can be done at any time during pregnancy, 2D imaging is ideal for expectant mothers between 16 & 20 weeks gestation.

2D Packages

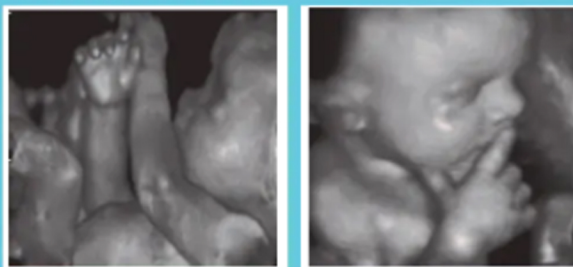

Basic 2D Package \$110

- 10-15 minutes scan time
- 5 hard-copy black & white pictures
- 1 Heartbeat Bear

Deluxe 2D Package \$140

- 10-15 minutes scan time
- 5 hard-copy black & white pictures
- DVD with all images and movie clips
- 1 Heartbeat Bear

3D/4D Ultrasound Imaging

3D ultrasound technology is used to produce 3D images and 4D movies of your baby. Printed images are in black & white while DVD files are colorized. Earlier in pregnancy images captured are more complete, whereas later improved facial features can be seen. An optimal time for a 3D/4D ultrasound is between 28 & 32 weeks gestation, although it can be done at any time during pregnancy.

3D/4D Packages

Basic 3D Package \$160

- 10-15 minutes scan time
- 5 hard-copy black & white pictures
- 1 Heartbeat Bear

Deluxe 3D/4D Package \$190

- 10-15 minutes scan time
- 5 hard-copy black & white pictures
- DVD with all images and movie clips
- 1 Heartbeat Bear

Heartbeat Bears

Looking for a unique pregnancy keepsake? Allow us to place your baby's heartbeat inside one of these adorable plush animals to create a priceless keepsake or gift. There is nothing more precious to an expectant mother than the sound of her baby's heartbeat.

Additional Heartbeat Bears Available for Purchase

Heartbeat Lamb

Heartbeat Giraffe

Heartbeat Elephant

Heartbeat Bear

Gift Certificates Available

* It is important to remember that the quality of images/movies captured is dependent upon the baby's position, movement, size, and the amount of amniotic fluid surrounding your baby.
